Tests for employees, agents, vendors and employment tests for federal, state and local agencies.

Benefits

- Flexibility
- Reduced cost of Exam/test implementation
- Efficient exam/test delivery
- Increased revenue
- Secure
- Modular

Application Specs

System requirements:

The testafrica.com platform is developed in PHP 4 (PHP 5) programming language. The system depends on neither the operating system used on the Web-server, nor the type of the server. Only PHP 4.1.2 or higher versions are needed along with any widespread tool for database management (MySQL, PostgreSQL, MSSQL Server or Oracle). Testafrica has been tested in the following operating systems:

- GNU/Linux (RedHat 6.x/7.x, Debian 2.x/3.x, Slackware 8.0, ...)
- Windows 95/98/NT/2000/XP/Vista
- Mac OS X 10.3/10.4
- Solaris 8.0
- FreeBSD 4.x

The system supports most of the database management tools below:

- MySQL 3.22.32 and higher
- PostgreSQL 7.1.3 and higher
- MSSQL Server 2000 and higher
- Oracle 8 and higher

Features

- ask any kind of question (true / false, multiple choice, short answer, essay, questions with more than one correct answer), and select questions from any question set at your own choosing;
- choose how to mark each question (for example, 2 points for a correct answer, 0.5 points for a partially correct answer, and 0 for an incorrect answer);
- format the text, add graphics, formulas, animation, and audio and video files;
- set up a style for your tests;
- create a bank of questions;
- import questions from almost any text documents;
- place an introductory text at the start of the test or before any question;
- shuffle your questions / answers;
- display one question per page or all questions on one page;
- define your own grading scale;
- create a password to access a test (optional add-on);
- assign a test to a certain group of users;
- provide a guest access to the testing system;
- create administrators, instructors, operators (for entering questions), regular users, and guests, and set their permissions accordingly;
- automatically send out testing results to any group of users by email (there are different features for adjusting custom email templates);
- automatically generate and put any data to reports/certificates about successful passing in PDF;
- view/manage testing results for each user or group of users;
- gather statistics from the answers to each question;
- and more...
